August 24th. 1970

DATE \_\_\_\_\_

In case the question arises, all 1971 Moto-Ski equipped with a 634cc Hirth engine will come with a carburettor return line, except a few early Grand-Prix models.

Originally, the 634cc models were scheduled without a return line, but since we received the carburettors with a return line, we opted for using them as such instead of converting them to a single line unit.

This is not a technical change and the performance will not be altered in any way.

Roger Lamontagne,

  
Technical Information Manager
