DATE December 28, 1970.

SUBJECT: NEW ANTI-SPILL VALVE FOR 1971 GAS TANK CAP.

To prevent any possible gas spillage by the gas tank cap (all 1971 Moto Ski snowmobiles) a new valve kit (kit no: 1L.1007) is now available from your distributor. This new anti-spill valve will replace the actual one on all 1971 snowmobiles.

INSTALLATION PROCEDURE

NOTE: The kit is formed of the following:

- a) 1 only Anti Spill valve                      part no: 10.01.022
  - b) 1 only Felt Washer                              part no: 70.01.016
1. Remove the existing valve from the gas tank cap.
  2. Immerse the gas tank cap in hot water (minimum 160 F) for period of 3 to 4 minutes.
  3. Blow into the new valve to make sure that air can flow freely through it. If a resistance is felt unblock the (2) orifices (one at each end) with a small wire.
  4. Position the felt washer into the warmed up gas tank cap.
  5. Press down (over the felt washer) the new valve into the gas tank cap.

REMARK: No labour time is allowed for this modification.
